## **RFID Access Control System MagicKey Pro**

The new MagicKey Pro RFID access control systems allows for supervising of single access points in offline mode. The device fits into a standard in-wall cabling fixing. It handles up to 200 RFID tags which can be carried like a key on a keyring. As soon as an allowed tag is detected, the door is opened via an electrical door opener.

If necessary, the last 3000 access attempts (including unsuccessful ones) can be read out and analyzed. Optionally, several MagicKey Pro devices can be connected to a party line and can be interfaced to a higher-level control system.

Further information can be found at [www.transponder.de](http://www.transponder.de).
