Laminated plastic cards available in small quantities

ZeitControl is able to deliver plastic cards in all gauges for all applications.

The well-known credit cards consist mostly of PVC and several layers of laminated plastic sheets. The printed sheet is perfectly protected by transparent material.

Nearly all ZeitControl plastic cards are manufactured according to this classical procedure. The result is a high grade multi-layer card that is suitable for all common personalisation techniques.

ZeitControl produces laminated plastic cards (minimum edition: 50 pieces) quickly, flexibly, at good quality and reasonable prices.
