Smartcard with 64 kByte E²Prom

Today, the applications of smartcards are various. ZeitControl extended its current sales program in order to meet the upcoming demands.

The new smartcard ZCM512C is compatible with the I²C Bus which is already available. ZCM512C provides a capacity of 64 kByte E²Prom and a write endurance of 100,000 cycles. This is suitable especially for applications where more external data has to be stored, e.g. for parameters and configurations.

The ZCM512C card can be provided as standard ISO format (ID-1) or SIM card (ID-000). The card material is blanco white and can be printed in full colour. ZeitControl also supplies various reader/writer units for smartcards.
