Data logger for RFID Transponders

This mobile RFID data logger features a read/write module for all popular transponders, a display and a 10 digit keyboard. Due to the built-in realtime clock the logger is well suited for applications like time recording, order processing and data capture.

The recorded data can be read out by means of the supplied PC software and can be stored in CSV format.

The user or systems supplier can develop and test own application by means of a graphical programming environment. This software is available at www.transponder.de free of charge.

Transponders/tags are available in various physical shapes.
