

Development Kits for Transponder Reader/Writer

ZeitControl cardsystems GmbH offers development kits for their family of TagTracer transponder reader/writer devices. When using these development kits, the effort for the integration of transponder technology into existing and new applications is greatly reduced.

There are three types of kits available:

- Development kit TagTracer Multi 125 kHz for EM4102, EM4050, HITAG 1 and HITAG 2 transponders
- Development kit TagTracer Mifare 13,56 MHz for Mifare transponders
- Development kit I-Code 13,56 MHz for I-Code transponders

The development kits contain the complete software on CD-ROM, printed documentation, a transponder reader/writer device in desktop enclosure, power supply, cable set and sample transponders.

For series production the various transponder reader/writers are available as OEM modules.
