TagTracer Multi – OEM RFID Reader Module

TagTracer Multi is an OEM RFID transponder reader/writer module for 125 kHz RFID transponders.

The module can be integrated into custom hardware like a big IC. The communications between host and reader uses a simple ASCII protocol. As long as a RFID transponder is within range, the host system can communicate easily with the RFID transponder via the TagTracer Multi using simple ASCII commands.

TagTracer OEM is also available as desktop device.

Typical applications are ticketing, time registration and identification.

Supplementary information is available at www.zeitcontrol.de .
